EASYFRAME

Patent nr. NL 2004848 + EP 2395168

PROFESSIONAL

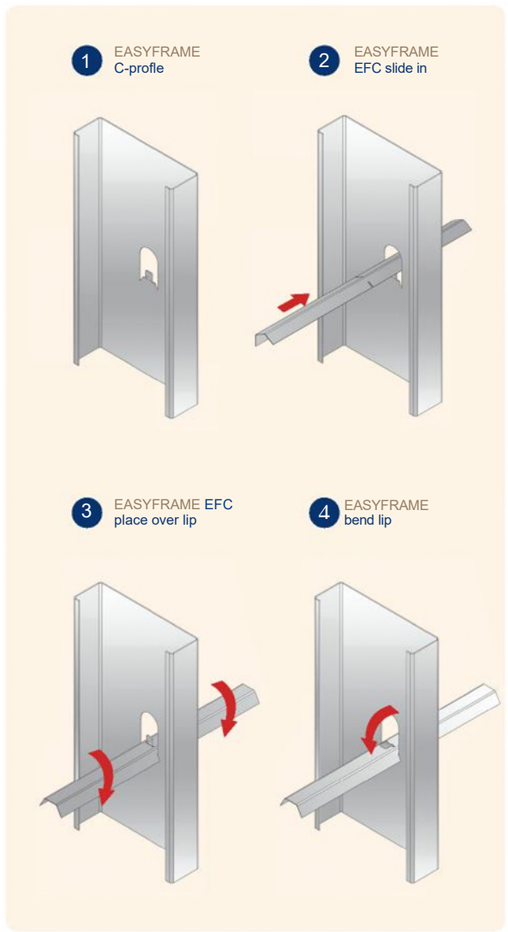

EASYFRAME

The first patented system for high walls up to 16 metres high and also suitable for cantilevered ceiling spans up to 11 metres.

This lightweight system consists of only 3 parts. The system is 30% lighter in weight than similar systems and also 30% faster to install. EASYFRAME was developed by and for professionals.

Wall

The system is built up by placing th EASYFRAME C-profiles in the U-profiles of approximately 65 mm hig h.
The C-profiles are provided with recesses on the back (1200 mm centre to centre), in which the EASYFRAME Connectors (EFC) are placed every 2400 mm. The EFC is simply fixed manually by bending the lip into the recess in the C-profile.
By doing so, the EFC directly stabilizes the C-profiles during the assembly. This creates a stable and solid construction.

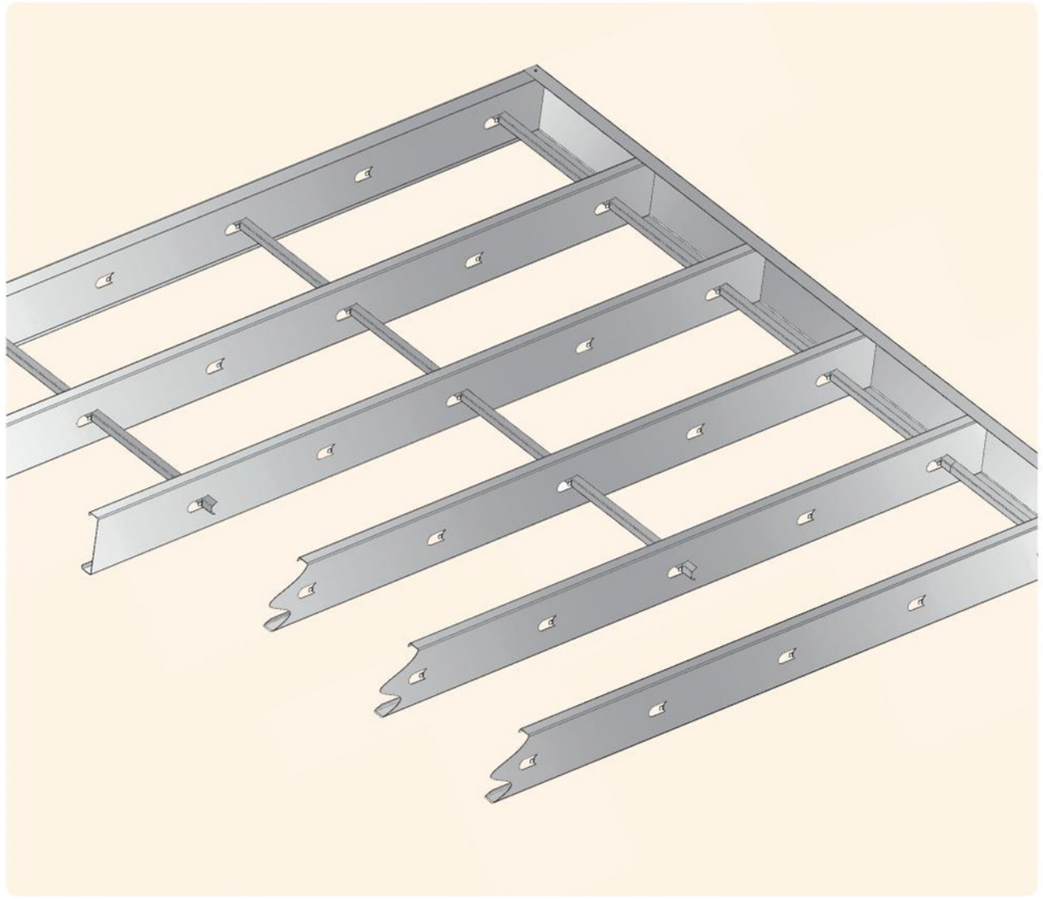

Depending on the height, the C- and U-profiles are produced in different thicknesses and widths.

Due to the simplicity of the system and the few components, unnecessary assembly errors are a voided. Door and window frames can also be easily integrated into the wall.

Ceiling

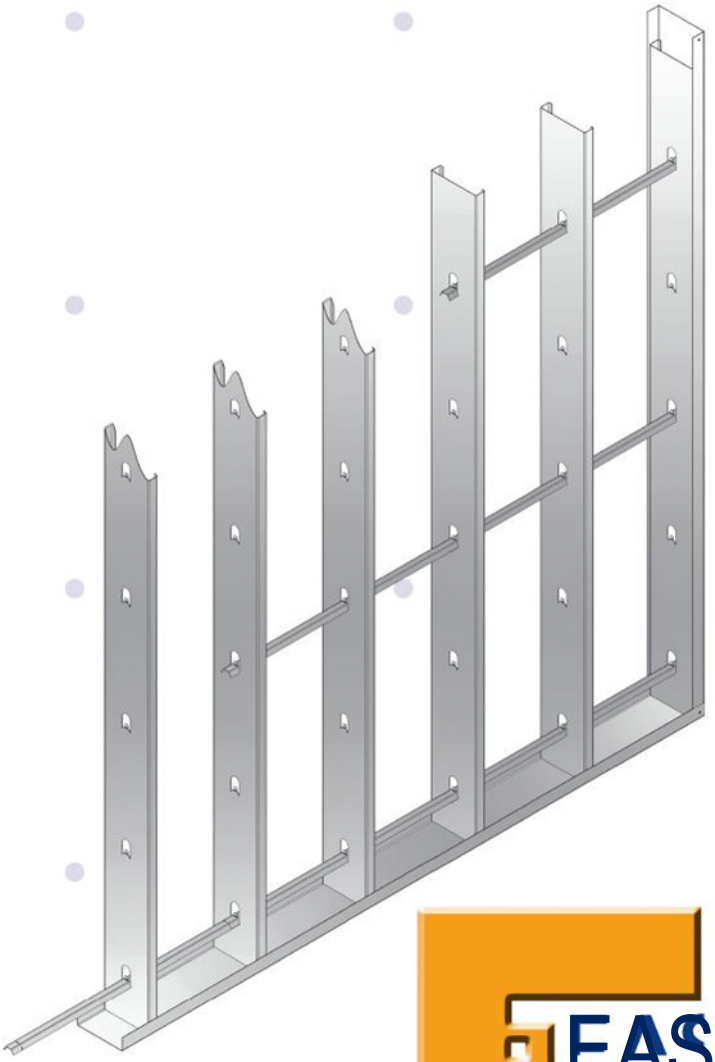

The EASYFRAME profiles are also suitable for ceilings where a large free-supporting span is required. Because the EASYFRAME system is up to 30 % lighter than similar systems, it is perfectly suitable for both new constructions and renovations. On our website you will find the calculation program with which you can easily calculate the required material yourself.

EASYFRAME
Patent nr. NL 2004848 + EP 2395168
PROFESSIONAL

Benefits

- First patented high wall system
- Patent nr. 2004848 + EP 2395168
- 30 % lighter than similar systems
- 30 % faster assembly
- Wall can be fitted with window- and door frames
- Dimensionally stable thanks to EASYFRAMEConnector
- 3 parts
- Easy to calculate yourself
- Good price and quality ratio compared to similar and traditional solutions.

PROFESSIONAL

Easy Housing B.V.
Is a metal processing company that, like its market, is in full swing. Thanks to our progressive research & development department, Easy Housing is known for its innovative products and machines.

Excellent reasons for choosing Easy Housing
- Basic materials of standardized (e.g. NEN/DIN/BS) and/or certified (e.g. KOMO) quality.
- Permanent quality control
- Production in accordance with ISO standards

Reliability
- High level of customer service
- Many years of experience in large and small projects
- Well-trained staff
- Extremely sophisticated machinery

Customer-oriented production
Short changeover times and optimum automation of the production process enable us to respond flexibly to our customers wishes and requests.

Extensive product range
- Wide range of products aimed at future market development
- Products on demand according to customer specifications
- Virtually unlimited possibilities by developing products and tool shop

Advice
Easy Housing advises and thinks along with you.
We support our products with technical details, assembly instructions and the accompanying accessories.
